

ACS in association
with project

The company [Alpes Connectique Services](#) is proud to be part of the [WattWay](#) solar highway project developed by the company COLAS and INES (Institut National de l'énergie solaire), the French National Institute for Solar Energy.

The COLAS group's ambition is to use many kilometres of roads, cycle paths and car parks to produce electricity with the world's first photovoltaic road surface.

The project presents a real challenge for [ACS](#): to design and develop a connective solution to handle the multiple climatic and mechanical strains placed on this particular environment, such as water, frost, extreme heat and the constant flow of traffic, but also to ensure long-term reliability and safety.

All our teams' knowledge and expertise are going into meeting this challenge and to help build the roads of tomorrow.

[Alpes Connectique Services](#) is an independent French SMB based in Savoy that designs and develops connectivity for industry.
